In the Claims

NOV-19-03

The following claim listing replaces previous listings of claims. Claims 22 and 72 are canceled without prejudice or disclaimer.

1. (amended) A method of treating metal pigment particles for inhibiting their reaction with water, comprising:

contacting a composition comprising metal pigment particles with a salt having the following formula

$$\begin{array}{c} \mathbf{O} \\ \mathbf{R}\text{-}\mathbf{P}\text{-}[\mathbf{O}^{-}]_{a} \\ | \\ [\mathbf{OH}]_{b} \end{array} \begin{pmatrix} \mathbf{R}_{1} \\ \mathbf{X}\text{-}\mathbf{N}^{+}\text{-}\mathbf{Y} \\ | \\ \mathbf{H} \end{pmatrix}_{a}$$

wherein a ranges from 0.25 to 2.0,

b ranges from 0.0 to 1.75, and a + b = 2.0,

R is selected from the group consisting of alkyl, alkenyl, alkynyl, aryl, and alkylaryl and comprises at least 6 carbon atoms;

 R_1 comprises at least six carbon atoms and is selected from the group consisting of alkyl, alkenyl, alkynyl, aryl, and [[or]] alkylaryl; and

X and Y are each independently either hydrogen or a moiety having from 1 to 20 carbon atoms selected from the group consisting of alkyl, alkenyl, alkynyl, aryl, and alkylaryl.

- 2. (original) The method according to claim 1, wherein R further comprises at least one functional group selected from the group consisting of hydroxyl, carbonyl, carboxyl, epoxy, ether, amino, nitro, nitrile, thio, silyl, sulfo, phosphato and halo.
- 3. (amended) The method according to claim 1, wherein at least one of X and Y is the moiety having from 1 to 20 carbon atoms and further comprises [[each independently have]] at

least one functional group selected from the group consisting of hydroxyl, carbonyl, carboxyl, epoxy, ether, amino, nitro, nitrile, thio, silyl, sulfo, phosphato and halo.

- 4. (original) The method according to claim 1, wherein R1 comprises at least eight carbon atoms.
- 5. (amended) The method according to claim 1, wherein R₁ further comprises at least one functional group selected from the group consisting of hydroxyl, carbonyl, carboxyl, epoxy, ether, amino, nitro, nitrile, thio, silyl, sulfo, phosphato and halo.
 - 6. (original) The method according to claim 1, wherein a ranges from 1.0 to 2.0.
 - 7. (original) The method according to claim 1, wherein b ranges from 0.0 to 1.0.
- 8. (amended) The method according to claim 1, wherein the salt [[compound]] is added neat.
- 9. (amended) The method according to claim 1, wherein the salt [[compound]] is added as a solution, the solution comprising the salt [[compound]] and a solvent that is miscible with water.
- 10. (amended) The method according to claim 1, wherein the metal pigment particles are aluminum, zinc, or bronze particles.
- 11. (amended) The method according to claim 10, wherein the metal pigment particles are aluminum.
- 12. (amended) The method according to claim 1, wherein the metal pigment particles have a particle size ranging from 1 to 500 microns.
- 13. (amended) The method according to claim 1, wherein the metal pigment particles have a particle size ranging from 5 to 100 microns.

- 14. (amended) The method according to claim 1, wherein the metal <u>pigment</u> particles are in flake form.
- 15. (amended) The method according to claim 1, wherein the metal <u>pigment</u> particles are in a paste comprising 55 to 95% by weight metal particles.
- 16. (amended) The method according to claim 15, wherein the paste comprises 60 to 85% by weight metal pigment particles.
- 17. (amended) The method according to claim 1, wherein the metal particles are in a slurry comprising 1 to 40% by weight metal pigment particles.
- 18. (amended) The method according to claim 17, wherein the slurry comprises 10 to 30% by weight metal pigment particles.
- 19. (amended) The method according to claim 1, wherein the amount of salt added ranges from 0.5 to 30% with respect to the weight of the metal pigment particles.
- 20. (amended) The method according to claim 1, wherein the amount of salt added ranges from 1 to 15% with respect to the weight of the metal <u>pigment</u> particles.
- 21. (amended) The method according to claim 1, wherein the salt and the metal <u>pigment</u> particles are agitated at a temperature ranging from 0 to 100 °C.

22. canceled

23. (amended) A method of method of making a coating composition, comprising adding metal pigment particles and a salt having the following formula to an aqueous coating composition carrier

$$\begin{array}{c} \mathbf{O} \\ \mathbf{R} \overset{\parallel}{-} \mathbf{P} \text{-} [\mathbf{O}^{-}]_{\mathbf{a}} \\ \downarrow \\ [\mathbf{OH}]_{\mathbf{b}} \end{array} \begin{pmatrix} \mathbf{R}_{\mathbf{1}} \\ \mathbf{X} \text{-} \mathbf{N}^{+} \text{-} \mathbf{Y} \\ \downarrow \\ \mathbf{H} \end{pmatrix}_{\mathbf{a}}$$

wherein a ranges from 0.25 to 2.0,

b ranges from 0.0 to 1.75, and a + b = 2.0,

R is selected from the group consisting of alkyl, alkenyl, alkynyl, aryl, and alkylaryl and comprises at least 6 carbon atoms;

 R_l comprises at least six carbon atoms and is selected from the group consisting of alkyl, alkenyl, alkynyl, aryl, and [[or]] alkylaryl; and

X and Y are each independently either hydrogen or a moiety having from 1 to 20 carbon atoms selected from the group consisting of alkyl, alkenyl, alkynyl, aryl, and alkylaryl.

- 24. (original) The method according to claim 23, wherein R further comprises at least one functional group selected from the group consisting of hydroxyl, carbonyl, carboxyl, epoxy, ether, amino, nitro, nitrile, thio, silyl, sulfo, phosphato and halo.
- 25. (amended) The method according to claim 23, wherein at least one of X and Y is the moiety having from 1 to 20 carbon atmoms and further comprises [[each independently comprise]] at least one functional group selected from the group consisting of hydroxyl, carbonyl, carboxyl, epoxy, ether, amino, nitro, nitrile, thio, silyl, sulfo, phosphato and halo.
 - 26. (original) The method according to claim 23, wherein a ranges from 1.0 to 2.0.
 - 27. (original) The method according to claim 23, wherein b ranges from 0.0 to 1.0.
- 28. (original) The method according to claim 23, wherein R₁ comprises at least eight carbon atoms.

- 29. (amended) The method according to claim 23, wherein R₁ <u>fluther</u> comprises at least one functional group selected from the group consisting of hydroxyl, carbonyl, carboxyl, epoxy, ether, amino, nitro, nitrile, thio, silyl, sulfo, phosphato and halo.
 - 30. (original) The method according to claim 23, wherein the salt is added first.
- 31. (amended) The method according to claim 23, wherein the salt is added after the metal <u>pigment</u> particles are added.
- 32. (amended) The method according to claim 31, wherein the salt is added within 30 minutes of contacting the metal <u>pigment</u> particles with water contained in any component of the coating composition.
- 33. (amended) The method according to claim 23, wherein the metal <u>pigment</u> particles are aluminum, zinc, or bronze particles.
- 34. (amended) The method according to claim 33, wherein the metal <u>pigment</u> particles are aluminum.
- 35. (amended) The method according to claim 23, wherein the metal <u>pigment</u> particles have a particle size ranging from 1 to 500 microns.
- 36. (amended) The method according to claim 23, wherein the metal <u>pigment</u> particles have a particle size ranging from 5 to 100 microns.
- 37. (amended) The method according to claim 23, wherein the metal <u>pigment</u> particles are spherical or are in flake form.
- 38. (amended) The method according to claim 23, wherein the amount of salt added ranges from 0.5 to 30% with respect to the weight of the metal <u>pigment</u> particles.

- 39. (amended) The method according to claim 23, wherein the amount of salt added ranges from 1 to 15% with respect to the weight of the metal <u>pigment</u> particles.
- 40. (amended) A method of treating metal pigment particles for inhibiting their reaction with water, comprising milling the particles with a salt having the following formula dissolved in a lubricant

$$\begin{array}{c} \mathbf{O} \\ \mathbf{R} \text{-} \mathbf{P} \text{-} [\mathbf{O}^{-}]_{a} \\ | \\ [\mathbf{OH}]_{b} \end{array} \begin{pmatrix} \mathbf{R}_{1} \\ \mathbf{X} \text{-} \mathbf{N}^{+} \text{-} \mathbf{Y} \\ | \\ \mathbf{H} \end{pmatrix}_{a}$$

wherein a ranges from 0.25 to 2.0,

b ranges from 0.0 to 1.75, and a + b = 2.0,

R is selected from the group consisting of alkyl, alkenyl, alkynyl, aryl, and alkylaryl and comprises at least 6 carbon atoms;

R₁ comprises at least six carbon atoms and is selected from the group consisting of alkyl, alkenyl, alkynyl, aryl, and [[or]] alkylaryl; and

X and Y are each independently either hydrogen or a moiety having from I to 20 carbon atoms selected from the group consisting of alkyl, alkenyl, alkynyl, aryl, and alkylaryl.

- 41. (original) The method according to claim 40, wherein R further comprises at least one functional group selected from the group consisting of hydroxyl, carbonyl, carboxyl, epoxy, ether, amino, nitro, nitrile, thio, silyl, sulfo, phosphato and halo.
- 42. (amended) The method according to claim 40, wherein at least one of X and Y is the moiety having from 1 to 20 carbon atoms and further comprises [[each independently comprise]] at least one functional group selected from the group consisting of hydroxyl, carbonyl, carboxyl, epoxy, ether, amino, nitro, nitrile, thio, silyl, sulfo, phosphato and halo.

- 43. (original) The method according to claim 40, wherein a ranges from 1.0 to 2.0.
- 44. (original) The method according to claim 40, wherein b ranges from 0.0 to 1.0.
- 45. (original) The method according to claim 40, wherein R₁ comprises at least eight carbon atoms.
- 46. (amended) The method according to claim 40, wherein R₁ <u>further</u> comprises at least one functional group selected from the group consisting of hydroxyl, carbonyl, carboxyl, epoxy, ether, amino, nitro, nitrile, thio, silyl, sulfo, phosphato and halo.
 - 47. (amended) A coating composition comprising:

a) metal pigment particles treated with a salt having the following formula for inhibiting their reaction with water

$$\begin{array}{c} \mathbf{O} \\ \mathbf{R} \text{-} \mathbf{P} \text{-} [\mathbf{O}^{-}]_{a} \\ | \mathbf{O} \mathbf{H}|_{b} \end{array} \begin{pmatrix} \mathbf{R}_{1} \\ \mathbf{X} \text{-} \mathbf{N}^{+} \text{-} \mathbf{Y} \\ | \mathbf{H} \end{pmatrix}_{a}$$

wherein a ranges from 0.25 to 2.0,

b ranges from 0.0 to 1.75, and a + b = 2.0,

R is selected from the group consisting of alkyl, alkenyl, alkynyl, aryl, and alkylaryl and comprises at least 6 carbon atoms;

R₁ comprises at least six carbon atoms and is selected from the group consisting of alkyl, alkenyl, alkynyl, aryl, and [[or]] alkylaryl; and

X and Y are each independently either hydrogen or a moiety having from 1 to 20 carbon atoms selected from the group consisting of alkyl, alkenyl, alkynyl, aryl, and alkylaryl; and

b) a carrier.

- 48. (original) The coating composition according to claim 47, wherein R further comprises at least one functional group selected from the group consisting of hydroxyl, carbonyl, carboxyl, epoxy, ether, amino, nitro, nitrile, thio, silyl, sulfo, phosphato and halo.
- 49. (amended) The coating composition according to claim 47, wherein at least one of X and Y is the moiety having from 1 to 20 carbon atoms and further comprises [[each independently have]] at least one functional group selected from the group consisting of hydroxyl, carbonyl, carboxyl, epoxy, ether, amino, nitro, nitrile, thio, silyl, sulfo, phosphato and halo.
- 50. (original) The coating composition according to claim 47, wherein a ranges from 1.0 to 2.0.
- 51. (original) The coating composition according to claim 47, wherein b ranges from 0.0 to 1.0.
- 52. (original) The coating composition according to claim 47, wherein R₁ comprises at least eight carbon atoms.
- 53. (amended) The coating composition according to claim 47, wherein R₁ further comprises at least one functional group selected from the group consisting of hydroxyl, carbonyl, carboxyl, epoxy, ether, amino, nitro, nitrile, thio, silyl, sulfo, phosphato and halo.
- 54. (amended) The coating composition according to claim 47, wherein the metal <u>pigment</u> particles are aluminum, zinc, or bronze particles.
- 55. (amended) The coating composition according to claim 54, wherein the metal pigment particles are aluminum.

- 56. (amended) The coating composition according to claim 47, wherein the metal pigment particles have a particle size ranging from 1 to 500 microns.
- 57. (amended) The coating composition according to claim 47, wherein the metal pigment particles have a particle size ranging from 5 to 100 microns.
- 58. (amended) The coating composition according to claim 47, wherein the metal pigment particles are spherical or are in flake form.
 - 59. (amended) A metallic paste comprising:
- [[a)]] metal pigment particles treated with a salt having the following formula to inhibit their reaction with water

$$\begin{array}{c} \mathbf{O} \\ \mathbf{R} \overset{\parallel}{-} \mathbf{P} \text{-} [\mathbf{O}^{-}]_{a} \\ \downarrow \\ [\mathbf{OH}]_{b} \end{array} \begin{bmatrix} \mathbf{R}_{1} \\ \mathbf{X} \text{-} \mathbf{N}^{+} \text{-} \mathbf{Y} \\ \downarrow \\ \mathbf{H} \end{bmatrix}_{a}$$

wherein a ranges from 0.25 to 2.0,

b ranges from 0.0 to 1.75, and a + b = 2.0,

R is selected from the group consisting of alkyl, alkenyl, alkynyl, aryl, and alkylaryl and comprises at least 6 carbon atoms;

R₁ comprises at least six carbon atoms and is selected from the group consisting of alkyl, alkenyl, aryl, and [[or]] alkylaryl; and

X and Y are each independently either hydrogen or a moiety having from 1 to 20 carbon atoms selected from the group consisting of alkyl, alkenyl, alkynyl, aryl, and alkylaryl; and

[[b)]] a liquid for forming the paste.

- 60. (original) The metallic paste according to claim 59, wherein R further comprises at least one functional group selected from the group consisting of hydroxyl, carbonyl, carboxyl, epoxy, ether, amino, nitro, nitrile, thio, silyl, sulfo, phosphato and halo.
- 61. (amended) The metallic paste according to claim 59, wherein at least one of X and Y is the moiety having from 1 to 20 carbon atoms and further comprises [[each independently comprise]] at least one functional group selected from the group consisting of hydroxyl, carbonyl, carboxyl, epoxy, ether, amino, nitro, nitrile, thio, silyl, sulfo, phosphato and halo.
- 62. (original) The metallic paste according to claim 59, wherein a ranges from 1.0 to 2.0.
- 63. (original) The metallic paste according to claim 59, wherein b ranges from 0.0 to 1.0.
- 64. (amended) The <u>metallic paste</u> [[method]] according to claim 59, wherein R₁ comprises at least eight carbon atoms.
- 65. (amended) The metallic paste [[method]] according to claim 59, wherein R₁ further comprises at least one functional group selected from the group consisting of hydroxyl, carbonyl, carboxyl, epoxy, ether, amino, nitro, nitrile, thio, silyl, sulfo, phosphato and halo.
- 66. (amended) The metallic paste according to claim 59, wherein the metal <u>pigment</u> particles are aluminum, zinc, or bronze particles.
- 67. (amended) The metallic paste according to claim 66, wherein the metal <u>pigment</u> particles are aluminum.
- 68. (amended) The metallic paste according to claim 59, wherein the metal <u>pigment</u> particles have a particle size ranging from 1 to 500 microns.

- 69. (amended) The metallic paste according to claim 59, wherein the metal <u>pigment</u> particles have a particle size ranging from 5 to 100 microns.
- 70. (amended) The metallic paste according to claim 59, wherein the metal <u>pigment</u> particles are spherical or are in flake form.
- 71. (original) A method of making a coating composition, comprising mixing the paste of claim 59 with a carrier to form the coating composition.

72. canceled

- 73. (amended) An automobile comprising a metal surface coated with the coating composition according to claim 47.
- 74. (amended) A metal pigment particle dispersion for forming metal pigment particlecontaining coating compositions, comprising:
- a) metal pigment particles treated with a salt having the following formula to inhibit their reaction with water

$$\begin{array}{c} \mathbf{O} \\ \mathbf{R}\text{-}\mathbf{P}\text{-}[\mathbf{O}^{\top}]_{\mathbf{a}} \\ | \mathbf{O}\mathbf{H}]_{\mathbf{b}} \end{array} \begin{pmatrix} \mathbf{R}_{\mathbf{1}} \\ \mathbf{X}\text{-}\mathbf{N}^{\top}\text{-}\mathbf{Y} \\ | \mathbf{H} \end{pmatrix}_{\mathbf{a}}$$

wherein a ranges from 0.25 to 2.0,

b ranges from 0.0 to 1.75, and a + b = 2.0,

R is selected from the group consisting of alkyl, alkenyl, alkynyl, aryl, and alkylaryl and comprises at least 6 carbon atoms;

 R_1 comprises at least six carbon atoms and is selected from the group consisting of alkyl, alkenyl, aryl, or alkylaryl, and

Ω3:55PM

X and Y are each independently either hydrogen or a moiety having from 1 to 20 carbon atoms selected from the group consisting of alkyl, alkenyl, alkynyl, aryl, and alkylaryl, and

b) a dispersion carrier for the metal pigment particles, the dispersion carrier being liquid at room temperature and compatible with a vehicle for forming a coating composition

wherein, the metal pigment particles are capable of remaining in a dispersed state in the dispersion substantially without separation.

- 75. (original) The dispersion according to claim 74, wherein R further comprises at least one functional group selected from the group consisting of hydroxyl, carbonyl, carboxyl, epoxy, ether, amino, nitro, nitrile, thio, silyl, sulfo, phosphato and halo.
- 76. (amended) The dispersion according to claim 74, wherein at least one of X and Y is the moiety having from 1 to 20 carbon atoms and further comprises [[each independently have]] at least one functional group selected from the group consisting of hydroxyl, carbonyl, carboxyl, epoxy, ether, amino, nitro, nitrile, thio, silyl, sulfo, phosphato and halo.
- 77. (amended) A method of making a metal pigment particle dispersion for forming a metal pigment particle containing coating composition, comprising:

mixing a composition comprising metal pigment particles treated with a salt having the following formula to inhibit their reaction with water with a dispersion carrier, the dispersion carrier being liquid at room temperature and compatible with a vehicle for forming a coating composition

$$\begin{array}{c} \mathbf{O} \\ \mathbf{R}\text{-}\mathbf{P}\text{-}[\mathbf{O}^{-}]_{a} \\ | \mathbf{O}\mathbf{H}]_{b} \end{array} \begin{pmatrix} \mathbf{R}_{1} \\ \mathbf{X}\text{-}\mathbf{N}^{+}\text{-}\mathbf{Y} \\ | \mathbf{H} \end{pmatrix}_{a}$$

wherein a ranges from 0.25 to 2.0,

NOV-19-03

b ranges from 0.0 to 1.75, and a + b = 2.0,

R is selected from the group consisting of alkyl, alkenyl, alkynyl, aryl, and alkylaryl and comprises at least 6 carbon atoms;

R₁ comprises at least six carbon atoms and is selected from the group consisting of alkyl, alkenyl, alkynyl, aryl, and [[or]] alkylaryl, and

X and Y are each independently either hydrogen or a moiety having from 1 to 20 carbon atoms selected from the group consisting of alkyl, alkenyl, alkynyl, aryl, and alkylaryl.

- 78. (original) The method according to claim 77, wherein R further comprises at least one functional group selected from the group consisting of hydroxyl, carbonyl, carboxyl, epoxy, ether, amino, nitro, nitrile, thio, silyl, sulfo, phosphato and halo.
- 79. (original) The method according to claim 77, wherein at least one of X and Y is the moiety having from 1 to 20 carbon atoms and further comprises [[each independently have]] at least one functional group selected from the group consisting of hydroxyl, carbonyl, carboxyl, epoxy, ether, amino, nitro, nitrile, thio, silyl, sulfo, phosphato and halo.
